**3,000+ Experts
from 750+ Companies
from 75+ Countries
trained (2012-08)**

USE61400-25
IEC 61400-25 user group

Dipl.-Ing. Karlheinz Schwarz, Karlsruhe/Germany
Editor of IEC 61850 and IEC 61400-25 (Wind Power Plants)
Member of IEC TC 57 WG 10, WG 17 (DER), WG 18 (Hydro Power Plants)
Member of IEC TC 88 PT 25 (IEC 61400-25, Wind Power Plants)
Convenor of IEC TC 88 IEC 61400-25-6 (Condition Monitoring)

You get comprehensive, first-hand, and neutral knowledge and experience

**Motivation:
sustainable
interoperability**

The standards IEC 61850 „Communication networks and systems for power utility automation“ and IEC 61400-25 „Communications for monitoring and control of wind power plants“ provide support for **sustainable interoperability: Information Models, Information Exchange Methods, Protocol Mappings, and System Configuration Language (SCL)** for Power Systems (Generation, Transmission, and Distribution for HV, MV, and LV, ...).

Data Models

Logical Nodes (LN) represent real-world **Inputs, Outputs, Ratings, and Settings of functions or equipment**. A LN provides a list of named data objects (DO). The LN "XCBR" represents a real "circuit breaker" with the data object (DO) "Pos" (Position). IEC 61850-7-2 defines **Information Exchange Methods**, e.g., for the position (with Client/Server services, GOOSE, SMV). **Data flow** is specified by a **SCL file** (IEC 61850-6).

IEC 61850-7-4xx

Substations (7-4)

160 LN
900 DO

Hydro Power (410)

63 LN
350 DO

Decentralized Energy Res. (420)

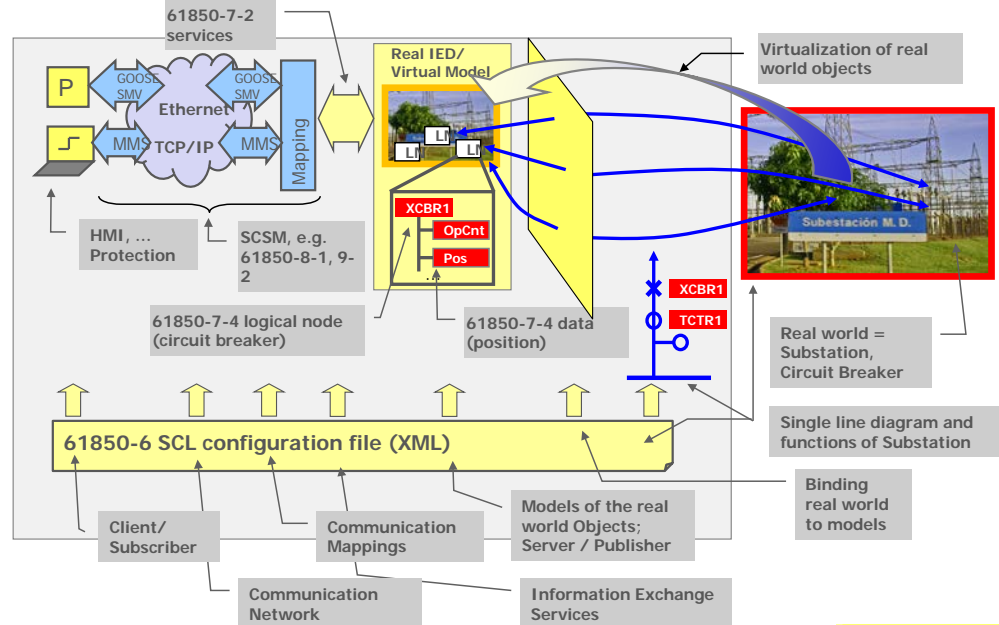

50 LN
450 DO

IEC 61400-25-2

Wind Power

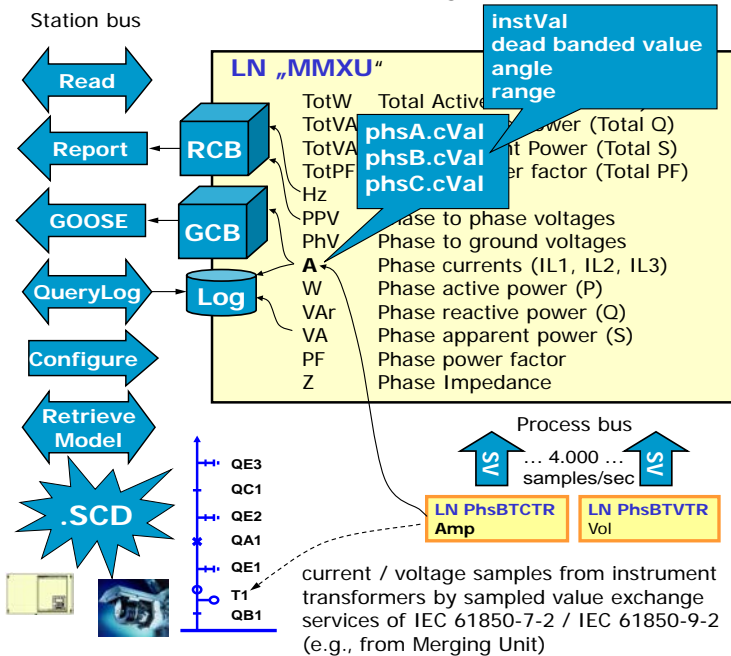

16 LN
250 DO

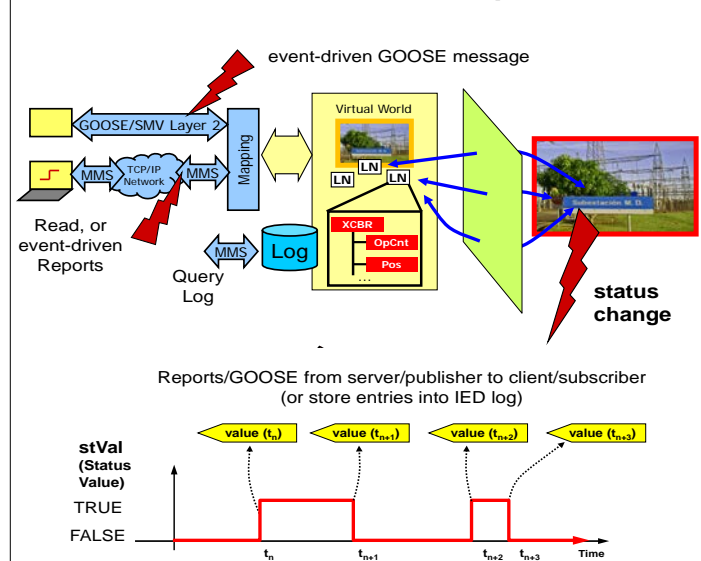

Example see reverse side

Example: Measurement LN “MMXU” represents power, voltages, currents, impedances, ... in a three-phase electrical system. The values can be communicated by various services. The LN “MMXU” comprises values for measurements, monitoring, configuration, settings, description, and substitution. These values can be communicated by various services like read (polling), reporting, GOOSE, logging and log query. Recording and logging are build upon monitored value changes. The SCL configuration file .SCD (System Configuration Description) specifies the single line diagram of the substation, the information model, the parameters of the control blocks for reporting and logging, GOOSE, SV, the binding to the process and the data flow.

LN and data objects

Information flow (example)

IEC 61850 and IEC 61400-25 Logical Node Classes

7410-FDIS ED2 (2012-08-08)

ACTM	Control mode selection. Joint control function, to balance total power from different sources.
AJCL	
APSS	PSS Control. Common information of a PSS function. PSS 2A/B filter. Represents a filter according to IEEE 421.5-2005.
APST	
APSF	PSS 4B filter. Represents a filter according to IEEE 421.5-2005.
FHBT	Heart beat function of a controlling device.
FSCH	Scheduler. This LN represents a task scheduler
FXPS	Functional priority status.
HBRG	Turbine – generator shaft bearing.
HCOM	Combinator (3D CAM or 2D CAM)
HDAM	Hydropower dam.
HDFL	Deflector control.
HDLS	Dam leakage supervision.
HEBR	Electrical brake.
HGPI	Gate position indicator.
HGOV	Governor control.
HGTE	Dam gate.
HITG	Intake gate.
HJCL	Power plant joint control function.
HLKG	Leakage supervision.
HLVL	Water level indicator.
HMBR	Mechanical brake for the generator shaft.
HNDL	Needle control.
HNHD	Net head data.
HOTP	Dam overtopping protection.
HRES	Water reservoir.
HSEQ	Start / stop sequencer.
HSPD	Speed monitoring.
HSST	Surge shaft or surge tank.
HTGV	Guide vanes (wicket gate).
HTRB	Runner blades.
HTRK	Trash rack,
HTUR	Turbine.
HUNT	Hydropower production unit.
HVLV	Valve.
HWCL	Water control function.
IFIR	Generic fire detection and alarm function.
IHND	Generic physical human – machine interface.
KHTR	Heater.
PRTR	Rotor protection.
RFBC	Field breaker configuration.
SFLW	Media flow supervision.
SLEV	Media level supervision.
SPOS	Device position supervision.
SPRS	Media pressure supervision.
XFFL	Field flashing.
