

USE61400-25 – IEC 61400-25 user group

To wind power people

IEC 61400-25 user group in wind power – opening meeting

It is my pleasure to invite you to a great event - the opening session for establishing an interest group focusing the new IEC 61400-25 standard on communication aspects within wind power.

The IEC standard series 61400-25 provides a solution for access to wind power plant information with standardized data names and semantic. It gives possibilities to procure monitoring and control solutions as separate parts, and to use a single system to store, analyze and present wind power information. In addition the standard opens up for control and monitoring of information from different wind turbine vendors in a homogeneous manner.

A uniform access to operational and historical information from wind turbines generation units is a prerequisite for efficient and effective operation and maintenance of wind power plants with a mix of wind turbine from different vendors and wind turbines on various evolutionary steps. This is where the IEC standard series 61400-25 "*WIND TURBINES – Communications for Monitoring and Control of Wind Power Plants*" could add great value to your wind power based generation business.

The last part of the standard has just been approved in august 2008 and some of the project team members have taken the initiative to establish a user group to support companies and persons with interest in using or implementing the standard. The companies behind the initiative are the following: Vattenfall, DONG Energy, Vestas Wind Systems, Ingeteam, Netted Automation and Q-Technology.

The initial name of the user group is defined to be "USE61400-25".

It will be very happily if you have the opportunity to attend the meeting, hosted by DONG Energy and Vattenfall, on Wednesday September 17th in DONG Energy facilities at Tegllholmen, A.C. Meyers Vaenge 9, 2450 Copenhagen SV

In attached agenda you will find interesting presentations given by global leading utilities within wind power generation. If you would like to give a short presentation it will be warm welcome. In order organize lunch and other logistic issues it will be very interesting to know your participation in due time before the meeting on e-mail given below.

If other persons in your network could have interest in the user group you are very welcome to pass on this electronic invitation to anyone that could get value from being member of the user group.

Look forward to meet you at the USE61400-25 opening session in Copenhagen.

USE61400-25 – launching team

Participation, presentations and questions can be communicated to:
Knud Johansen on e-mail: kj@qtechnology.dk
